THE newest mechanical weather observer is a radiometeorograph, an instrument which makes Its own observations, sending them out instantaneously as signals to be picked up by properly tuned radio sets within a radius of 200

Two sensitive elements react to temperature changes. A barom. eter capsule contracts or expands with change of atmospheric pressure: a bi-metallic coil curls or uncurls, with changing tempera-A third hand, the timer, turns on a miniature broadcasting

The radiometeorograph is carried up by a sounding balloon capable of rising 20 miles-or higher-and staying in the air for about 2 hours. These balloons can be sent up in any kind of weather, from any place, including the sea coast and ships at sea. When the balloon bursts a small parachute, attached between it and the instrument, insures the safe descent of the radiometeorograph.
